

Mock Draft Simulator

[View](#)

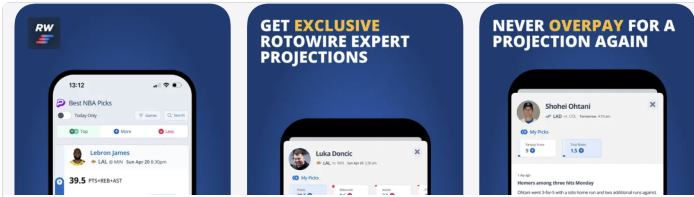

Designed and coded a fantasy football mock draft simulator with live sync support. Also wrote the algorithm that suggests which player the user should pick.

Fantasy Football Start / Sit Tool

[View](#)

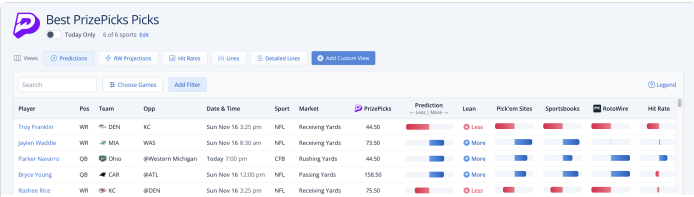

Designed and coded a tool to help people decide who they should start in the current week. Also wrote the logic behind the Monte Carlo simulation that powers the core tool.

Player Prop Picks App

[View](#)

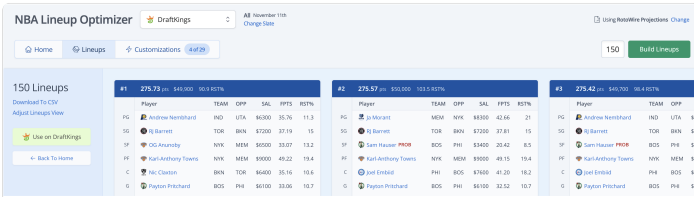

Designed and co-developed this React Native app for iOS and Android that suggests player props to target on sites like PrizePicks and DraftKings.

Player Props Research Tool

[View](#)

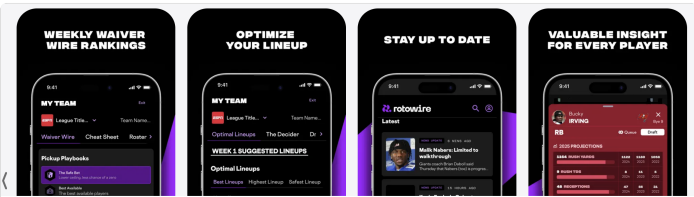

Designed and developed a web application that helps suggest player props to target. Also wrote the suggestions algorithm and designed the API structure.

Lineup Optimizer

[View](#)

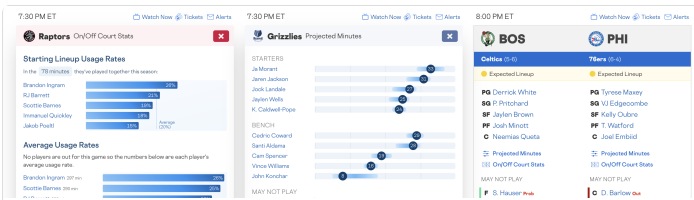

Designed and co-developed a lineup optimizer for daily fantasy contests on sites like DraftKings and FanDuel. Also helped write the optimization algorithm.

Fantasy Football App

[View](#)

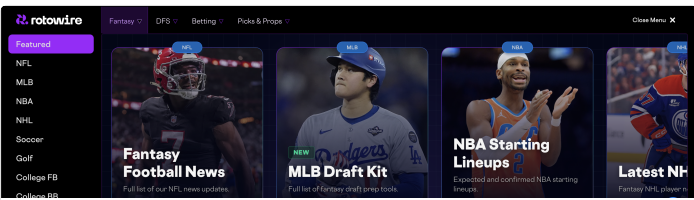

Helped design and develop a full-featured fantasy football app with both draft and in-season tools. Also wrote extensive planning documents to jumpstart the process.

NBA Lineups with Premium Tools

[View](#)

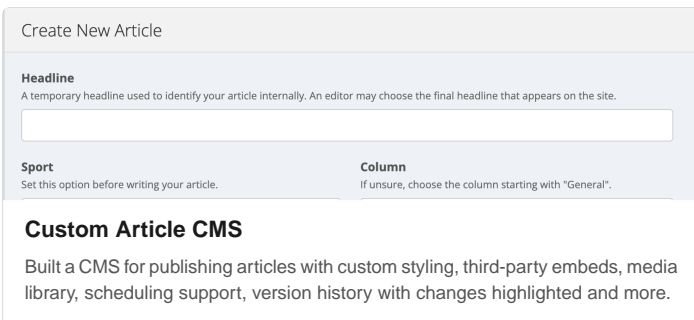

Designed and co-developed a NBA Lineups page that is the most popular across the industry. Also created premium tool add-ons that generated substantial revenue.

RotoWire Navigation

[View](#)

Designed, developed and created the data structures to support a truly-unique site navigation that handles a variety of complex use cases. Did everything end-to-end including a custom admin system and all database tables and queries.

aaronquinn.dev

[View](#)

A full-stack professional platform powered by Claude AI. Features an AI-driven interview system that extracts structured career context through multi-round conversations, a context snippet library for managing reusable professional narratives, and an AI pitch generator that produces tailored, evidence-backed candidate pitches for specific job descriptions — all backed by Supabase Postgres with server-side rendering and streaming AI responses.
